AGRI4U CREATES IDEAL GROWING CONDITIONS

Agri4U a company specialized in horticultural solutions. We are a team of very experienced technicians and down to earth managers. One of our founders is a well known Dutch grower. One can use his knowledge to discuss your demands.

Agri4U develops, manufactures and installs greenhouse projects all over the world. Within our company we have the knowledge to design any kind of greenhouse especially the aluminium system & steel construction. One of the advantage is the relationship with the production facilities of steel, aluminium and glass, in Europe as well as in China. Resulting in outstanding quality, competitive price and short delivery time. These ingredients distinguishes us in quick reaction to changes or requests in the market. We have outstanding international partners for screen installations, heating installations, irrigation installations and electrical systems. There for we are able to provide the client complete projects.

Know-How & Experience

Your Partner for the International Market

GREENHOUSE TECHNOLOGY

Our greenhouses are designed to create the best growing circumstances. All our greenhouses are built in accordance with the latest greenhouse standards. We engineer and manufacture our own steel constructions and aluminium systems. That is why Agri4U is able to use new techniques and technologies to obtain an optimal result.

HEATING & CLIMATE TECHNOLOGY

Agri4U develops solutions for specific crops with the climatological conditions needed. A tailor-made solution which meets your ideas concerning return on investment and sustainability. Together with one of our partners we are able to supply you the best quality heating & climate solutions.

IRRIGATION TECHNOLOGY & WATER RELATED APPLICATIONS

An irrigation system is used to supply water, fertilizers & protection resources to the crop. That is why the crop will be the basis of our design. With our knowledge we deliver you a reliable system for growing your crop.

ELECTRICAL & AUTOMATION TECHNOLOGY

The link between the climate computer and the electrical components, controls and sensors. We provide you complete engineering and installation for all greenhouse related systems. All power and control cables connecting the pumps, valves, aspirators, sensors, lighting, socket outlets, etcetera, are offered to provide you a state-of-the-art climate computer.

LOGISTIC SYSTEMS & CONSUMABLES

When we talk about a complete project, Agri4U can also arrange the logistic hardware, such as harvesting carts, grading & packing equipment. Even consumables like grow slabs, groundcover hooks & wires etcetera.

ADVICE

Within our network we have experienced specialists. They can help you with a feasibility study, financing, design, growing consultancy, marketing and sales.
